MORGEN TECH

CONTROL-POWER MONITOR FOR DC FAST CHARGERS

# The charger says "faulted". *We show what its power did.*

On the DIN rail. Built to record what the 24 V rail does, so you can see what it did when a charger went down.

| 0–62 V | ±0.5 % | 9–32 V | 1,000 |
|---|---|---|---|
| 12 / 24 V RAILS | AFTER CALIBRATION · TARGET | OPERATING INPUT | EVENTS ON BOARD · TARGET |

PRELIMINARY

## THE BLIND SPOT

### Your monitoring stops one layer above the fault.

ONE WAY IT HAPPENS: Contactor opens → 24 V rail rings → Controller resets → "Faulted" · no log

## WHAT IT DOES

**Built to record the event**

Target: transients on the 24 V rail, timestamped, in a record that survives a power loss. The capture hardware is in design.

Peak + 50 ms waveform · 1,000 events: target · hardware in design

**Built to alert your team**

Target: the event reaches a dashboard and the technician's phone over Wi-Fi. Firmware and dashboard are in development.

Wi-Fi · dashboard and phone alert: target

**Shows where it repeats**

Target: see which chargers' 24 V supply keeps dipping, per site and fleet. Current: with the clamp module (planned · v2).

12 / 24 V · 0–62 V range · ±0.5 % after calibration (target)

## WHO IT'S FOR

CPO FLEET

**See which chargers keep losing their 24 V supply.**

Send the technician with the record, not a guess.

SERVICE COMPANY

**Arrive with the answer, not the question.**

See it. Plan it. Fix it once.

CHARGER OEM

**Turn "no fault found" into field data.**

Field data from every unit. Warranty disputes get evidence.

## VARIANTS

RS-24-S · SLIM

**Slim**

Narrow DIN module. Wi-Fi. For small CPOs.

RS-24-S · COUPLER

**Standard**

DIN coupler. Wi-Fi. Expansion slots: Ethernet and clamp module planned · v2.

RS-24-M

**OEM module**

Bare board 99 × 69 mm. Modbus TCP · MQTT · signed OTA: firmware in development.

**On the roadmap · no commitment:** NFC tap-to-read at the cabinet BACKLOG · Cellular field variant BACKLOG · Plug-in sensing and communication modules PLANNED · V2 — vote for what you need: hello@morgen-tech.com

**Pilot programme.** Limited pilot slots from Q2 2027 · test units on loan under a test agreement · no lock-in.
